

## Greening the AIB - steps in 2016

### The AIB commits to take responsibility for promoting sustainability within its own organisation

---

Electricity disclosure is highly relevant for electricity produced from renewable energy sources. Supporting an environmental friendly electricity market in Europe, AIB is part of the transition to a more sustainable world.

The AIB takes responsibility for its own organisation, and seeks to make its own structures and organisation environmentally and socially friendly. The main areas where AIB is able to improve its own sustainability are communication (website, emails) and the meetings which it holds across Europe.

Since 2012 AIB took several steps to improve its sustainable impact, and will take further responsibility of its operations by means of the following steps:

- ▶ Continuing to power its servers and computers using preferably renewable energy; and to benefit from the services of [Wattimpact](#).
  - ▶ Printing its Annual Reports on the most environmentally friendly paper (FSC paper, 100% recycled), in cooperation with the printing company [Lokay](#) that has committed itself to be a sustainable printer.)
  - ▶ Carbon offset all travelling by attendees to AIB meetings, including the four General Meetings per year, physical Working Group meetings, the annual Strategy Meeting and all travels for reviews and audits. In 2015, a total of 32,5 t CO<sub>2</sub> were compensated by [atmosfair](#).
  - ▶ Holding its quarterly General Meetings:  
Seek venues (hotels) with environmental management certification, and preferably those which engage in other activities relating to improving energy efficiency, reducing environmental impact and supporting social responsibility.
-
