

Introduction

Thierry Van Craenenbroeck

VREG Technical director
AIB Board member

Why this forum?

- AIB Internal work groups
- Consultation and discussion with market parties
 - Joint Board meetings with RECS-International
 - Markets Committee
- Cooperation with governmental agencies c.q. national regulatory authorities
 - Direct contacts with CEER – TF Sustainable development
 - Governmental and regulatory committee

Governmental and regulatory committee

- Priority focus on certificate based disclosure:
 - A reliable energy certificate system is a tool/prerequisite
 - to stimulate competition
 - to inform consumers
 - Market functioning and transparency is created
 - with adequate legislation
 - under regulatory control
- Other possible topics in future
 - Certificate based production support measures
 - Certificate based energy savings measures

The missing link

- Directive 2003/54/EC: requirement for MS to have a reliable disclosure system
- Directives 2001/77/EC and 2004/8/EC: requirement for reliable GO for RES and CHP
- Implemented in most MS in a variety of ways
- Link between both in revised RE-Directive 2009/28/EC and a clearer role and specifications for GO's
- AIB enables and promotes EECS: harmonised GO-system with transferable electronic certificates

Agenda

- Presentation AIB (G.van Dijk)
- Tour de table: the challenges (introduced by T.Howes)
- Presentation E-Track (M. Draeck)
- Proposal for disclosure/residual mix activities (C.Timpe)
 - ❖ Coffee break at 15h30
- Reaction from the market (C.Hedenström)
- Reaction from CEER (B.De Waele)
- Discussion: the way forward

Challenges

- How disclose without double counting?
 - ❖ Today: national calculations (residual mix) based on statistics
 - ✓ No correct picture: transfers of GO's are not accounted for
 - ❖ E-Track project I and II makes recommendations for avoiding double counting
 - ✓ Could be used as starting point for discussions
