

Summary¹

Membership continues to grow, with Wallonia having applied for membership of the RES GO and CHP GO schemes for 2007; Switzerland applying for membership of the RES GO scheme; and Sweden applying for membership of the disclosure scheme.

The market continues to grow at a cyclical, increasing rate. Transfers have stayed fairly constant for the last three years, while issuing and redemption have grown 30-50% per annum. Volumes issued, transferred and redeemed continue to increase faster in 2007 than in previous years; while so far in 2007 more certificates have been issued than ever before. Sweden and Norway have overtaken Netherlands and Flanders as the major redeeming countries; while the major certificate issuing countries remain Norway and Sweden, then Finland and Netherlands; Norway now being responsible for issuing most certificates. The largest exporters remain Sweden, Norway and Finland; while Netherlands, Flanders (in March) and increasingly Germany remain the major importers.

Regarding technology, hydropower is by far the majority technology, most other technologies having virtually ceased to contribute; although wind power still contributes 4% and biomass 2%. That being said, the number of issued hydropower certificates is not quite matched by the market for these certificates – 93% of issued certificates are for hydropower, but only 89% of the redeemed certificates: demand for other forms of certificate (particularly energy crops and wind) is proportionally higher.

For **Benelux**, RECS activity is diminishing with Wallonia about to start operations, subject to gaining membership of the CHP GO and RES GO schemes, although eCERTe continues to import and redeem some certificates. Flemish certificate issue has been similar to 2006, but there have been some exports. Dutch redemption continues to grow at the same rate as 2006, but issuing is a little lower and exports considerably larger.

Regarding the **Nordic** countries, Denmark continues to be a minor participant in the market, but recently commenced importing and redeeming certificates; Finland issued and redeemed less than usual, but remains a major participant; Norway continues to issue, export and redeem certificates at a higher rate than before; and Sweden continues to issue and redeem more certificates than ever before. Redemptions in May were the highest of any country since AIB records began.

Of the **Mediterranean** countries, the French market is growing rapidly; the Italian market is similar to last year, with no international transfers, but far higher redemption; Slovenia has redeemed a few certificates, but has otherwise been inactive for the past year; and there has been little activity in Spain since January 2007 (international transfers await a revised Domain Protocol).

For **central Europe**, Austria is increasingly using its guarantee of origin database which will be transferred to an EECS database when connected to the HUB; Switzerland was relatively quiet, but has started importing more certificates than in the past; and Germany has imported and redeemed more certificates than in previous years.

Finally, on the **Atlantic** coast, the Irish market has now opened, with certificates issued and exported; and Portugal continues to issue a similar number of certificates to previous years, and is now redeeming them.

Phil Moody (Secretary General) – 24th July 2007

¹ All certificates are 1MWh. As metering data is the basis for issuing certificates, there is always delay in gaining accurate statistics for a particular month, so the most recent quarter is understated and corresponding information should be treated with care. International trade statistics continue to be misleading due to the practice of redeeming certificates in one country and transferring the renewable benefit over national borders by means of redemption statements. This seems to be increasingly replaced by electronic transfer.

Data for the last quarter has been collected from all members except the issuing body for RECS certificates in Belgium.

The tables above display issue and redemption statistics for each year to date, and for 2001-7 in total. These, and the following charts, show that volumes issued, transferred and redeemed continue to increase at a greater rate during 2007 than in previous years.

Comparing 2007 with 2006, the major certificate issuing countries remain Norway and Sweden, then Finland and Netherlands (which are both diminishing as issuers). Note that Norway is now responsible for issuing the majority of certificates.

Regarding technology, hydropower is now by far the majority technology; most other technologies having virtually ceased to contribute; although wind power still contributes 4% and biomass 2%.

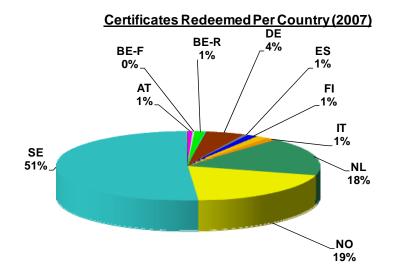

Certificates Issued Per Technology (2007)

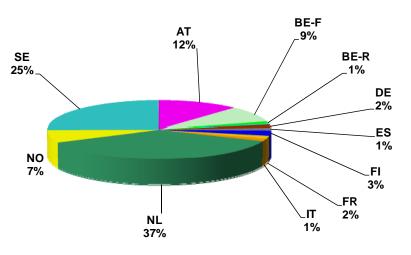

Certificates Issued Per Technology (2006)

Again comparing 2006 with 2007 to date, but this time for certificates redeemed, Sweden and Norway have this quarter eclipsed Netherlands and Flanders as the two major redeeming countries, Austria having virtually ceased to do so this year. In addition, Germany is redeeming a substantially increasing number of certificates.

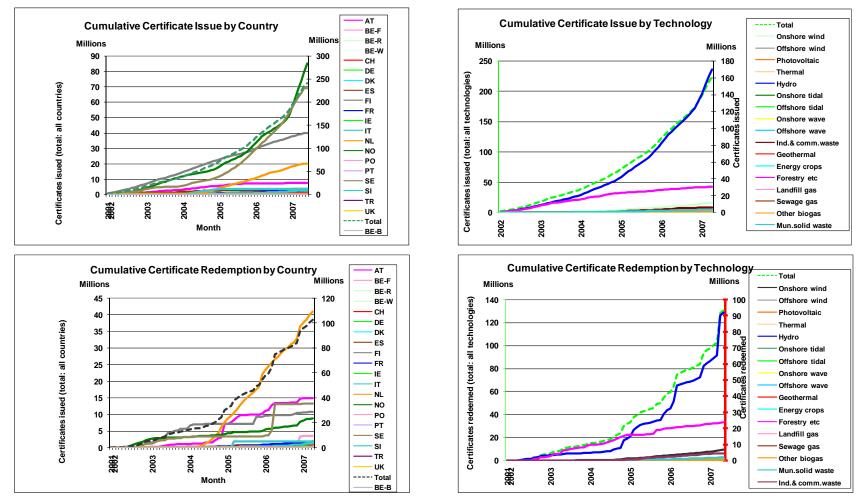

Overall, issuing and redemption are increasing more rapidly as guarantees of origin are increasingly used for disclosure purposes.

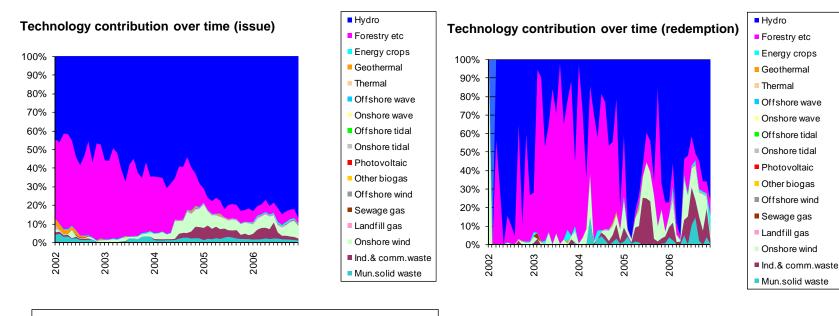

The volume of hydro issued and redeemed continues to increase substantially at the expense of everything else (except wind).

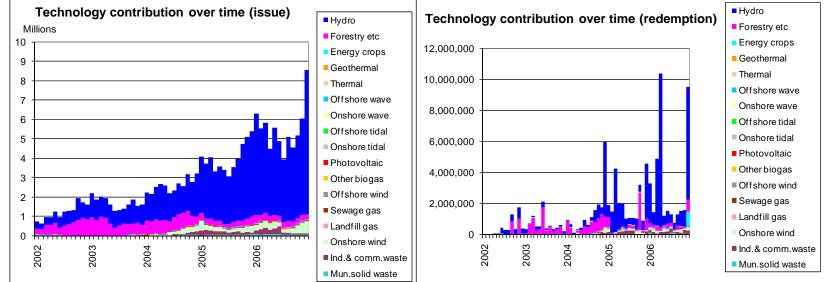

Another way of considering changing trends in technology is to consider the blend of technologies for which certificates are being issued and redeemed at any point in time. The following bar charts show that the significant growth in hydropower certificates is not matched by the market for these certificates – although around 93% of issued certificates are for hydropower, only 89% of the redeemed certificates are – meaning that the demand for other forms of certificate (particularly energy crops and wind) is proportionally higher.

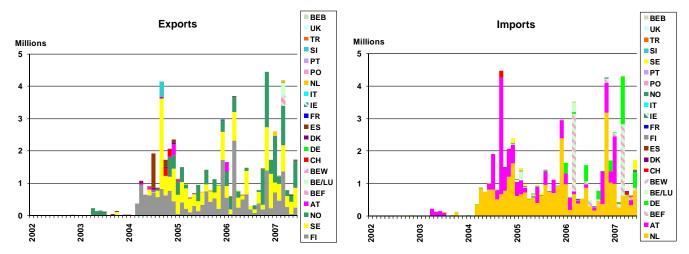

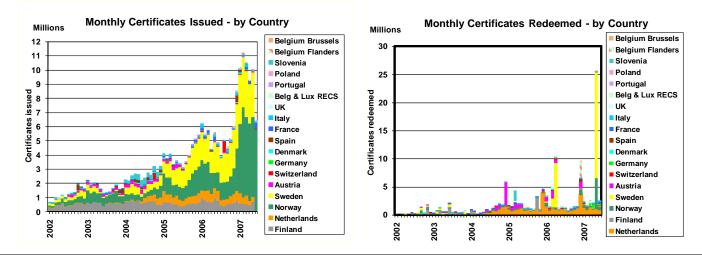

The largest exporters remain Sweden, Norway and Finland; while Netherlands, Flanders (in March) and increasingly Germany remain the major importers.

Monthly activity

The following bar charts summarise monthly issuing and redemption, clearly showing the influence on international trade of the producing countries – Finland and Norway, and to a lesser extent Sweden and Netherlands; and of the consuming countries – Netherlands, Germany & Flanders, and significantly Sweden during the last quarter.

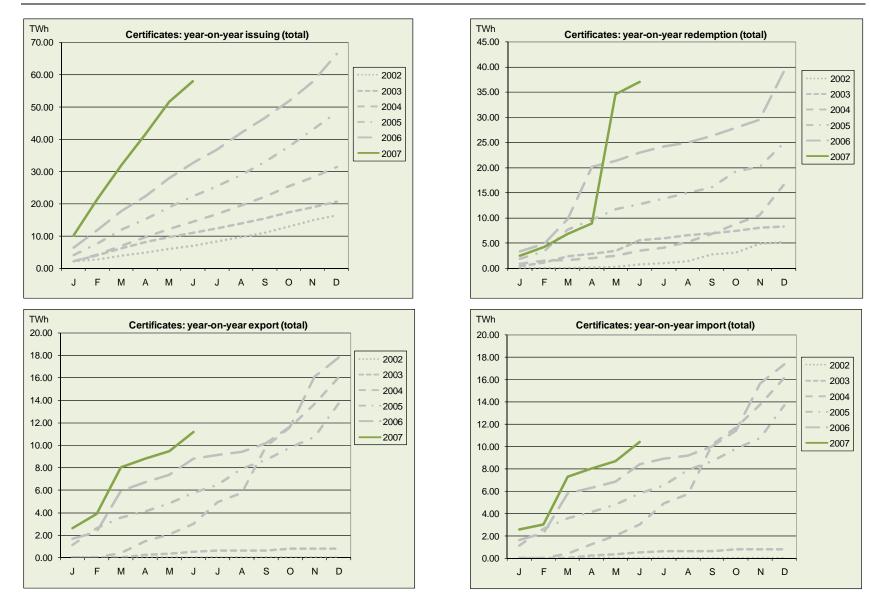

Year-on-year

Issuing, international transfers and redemption all continue to grow increasingly this year, with a sudden increase in redemption driven by Nordic countries requiring the redemption of guarantees of origin for disclosure purposes.

Date: 24th July 2007

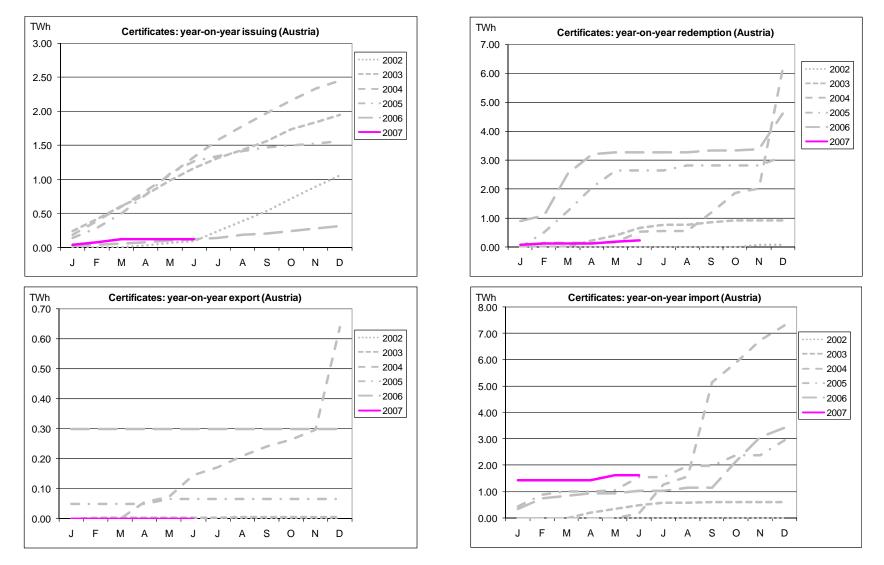

Revised certificate activity figures for the period to end June 2007

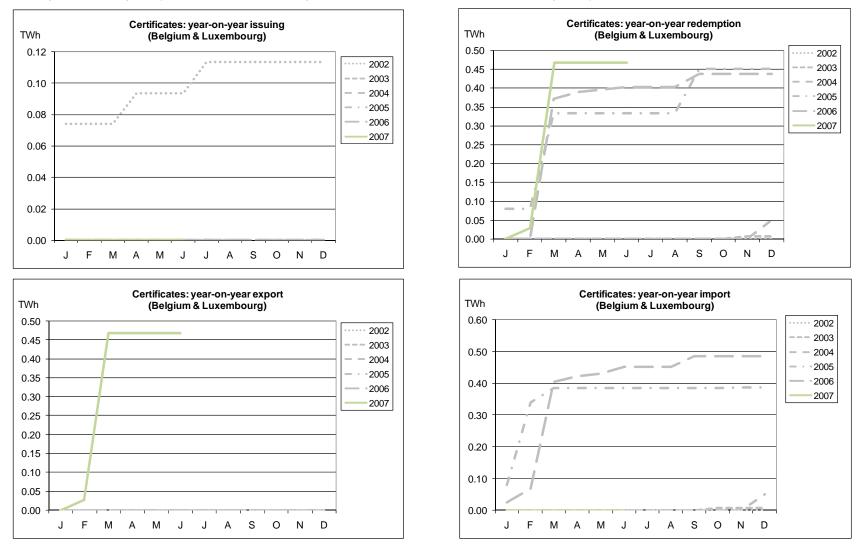

Austria is increasingly using its guarantee of origin database which will be transferred to an EECS database when connected to the HUB

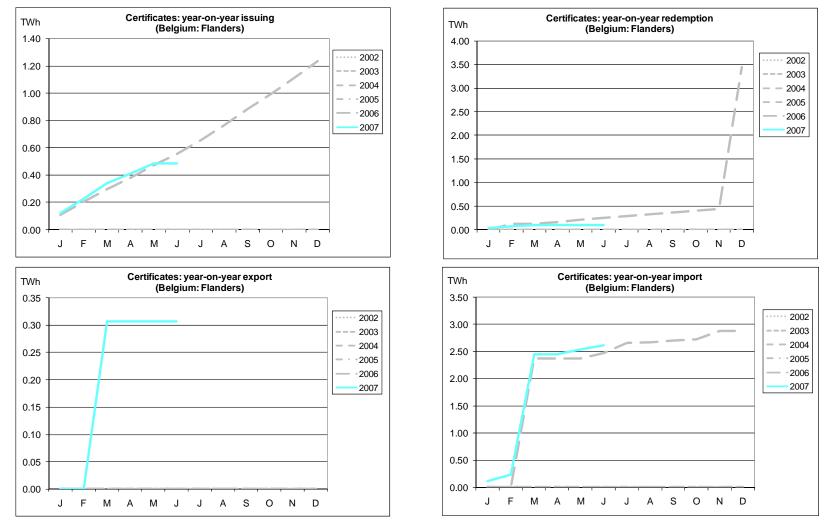

Belgium / Luxembourg. RECS activity, as expected, is diminishing with the promise of Wallonia commencing operations (Wallonia has now applied for AIB membership). In the meantime, eCERTe continues to redeem certificates on behalf of the CWaPE, resulting in growing redemptions and exports (note, however, that no report has been received from eCERTe this quarter).

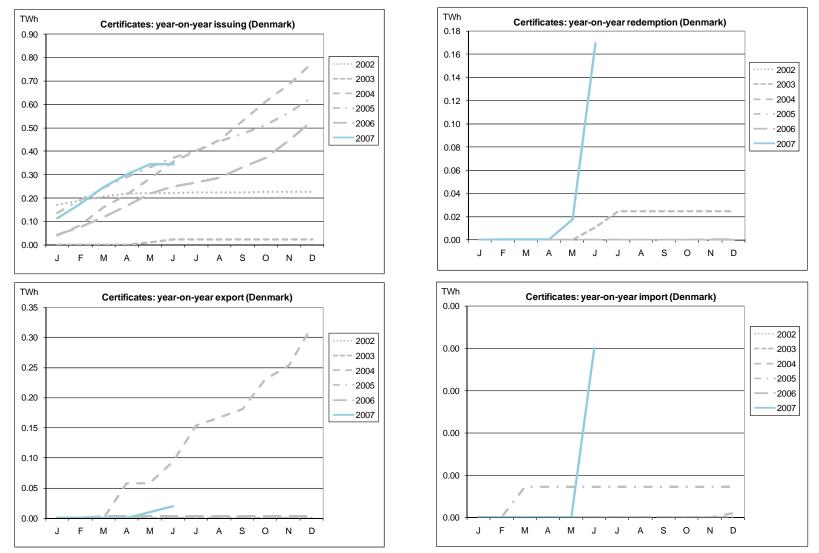

Belgium (Flanders). Certificate issue has been broadly the same as last year. Imports have been the same as last year, but for the first time there have been some exports. The ongoing redesign of the registry will result in better data being made available soon.

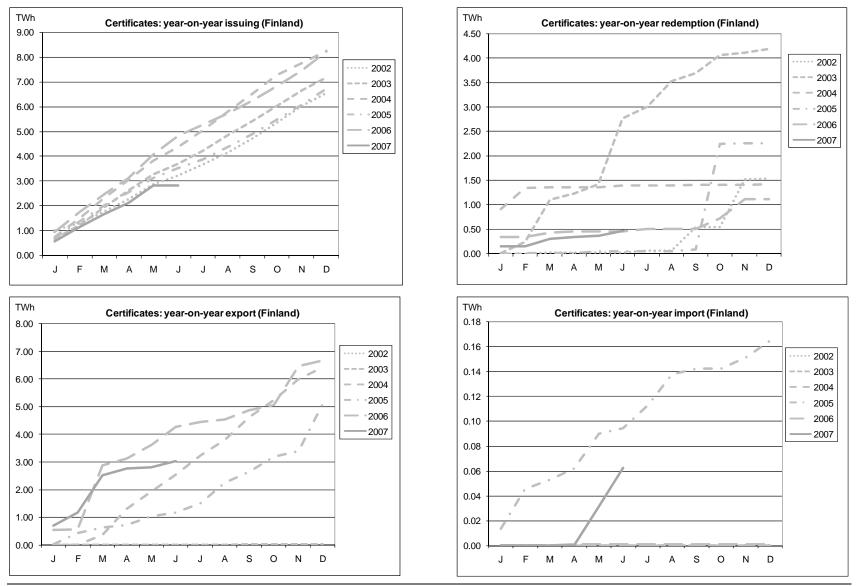

Denmark. Denmark continues to be a minor participant in the market, but has recently commenced importing and redeeming certificates, presumably for disclosure purposes.

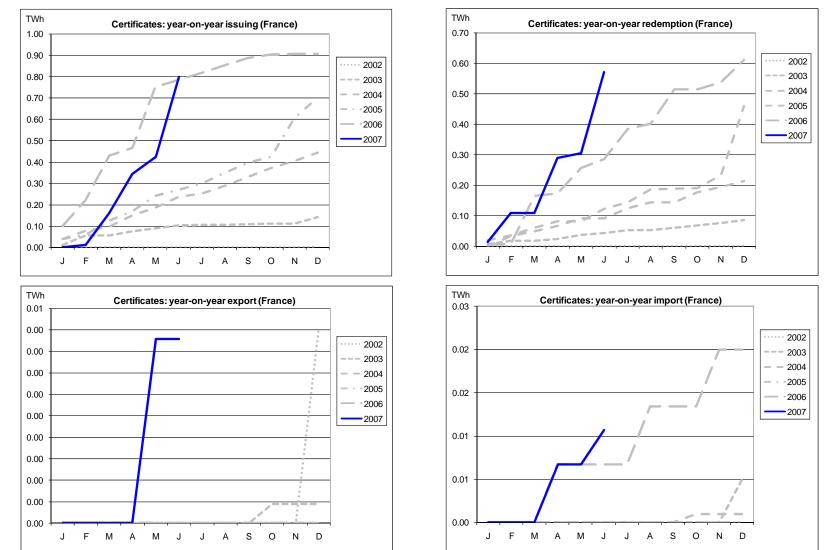

Finland has issued and in particular redeemed less than its usual large number of certificates, but still remains a major participant. It is exporting about the same as last year, and has recently commenced importing certificates.

AIB-2007-Statistics-Jul.doc

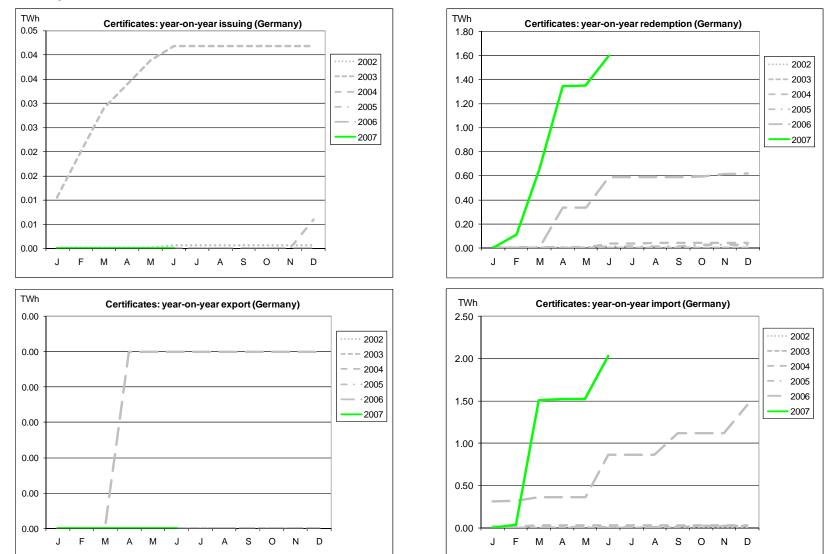

26 July 2007

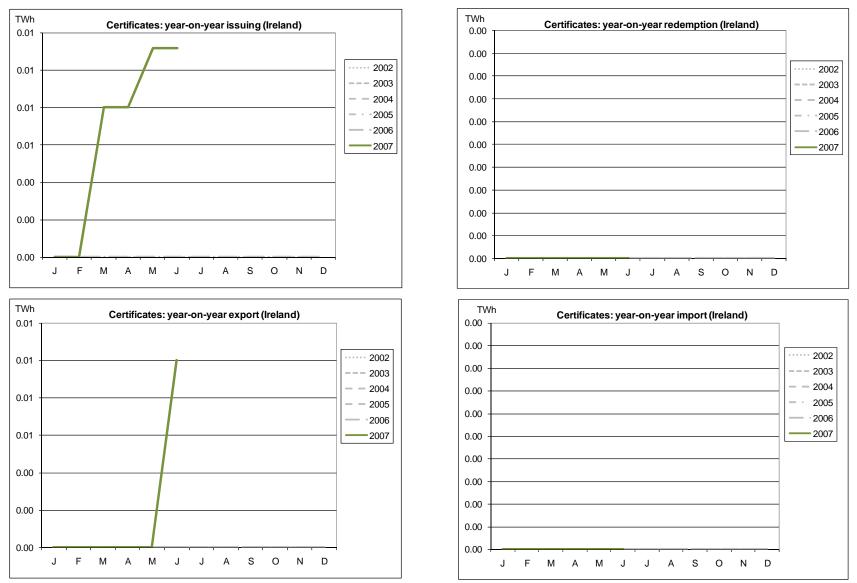

France. The French market continues to grow rapidly, with international trade and redemption fast outstripping that for 2006.

Germany has imported and redeemed large numbers of certificates in excess of the numbers experienced in previous years.

Ireland. The Irish market has now opened, with certificates issued and exported.

Italy. Issuing is similar to last year, but redemption is far higher. There have been no international transfers.

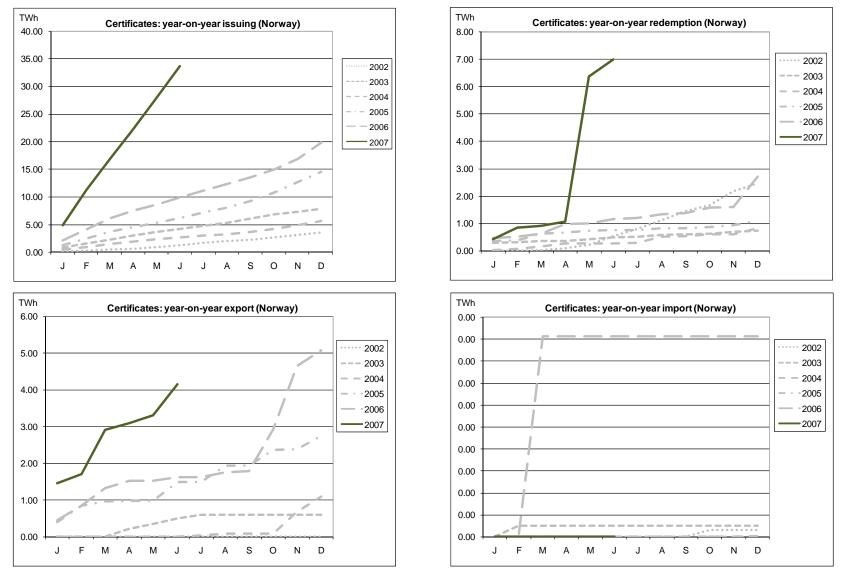

Netherlands. Redemption continues to grow at around the same rate as 2006, although issuing is a little lower. Exports are considerably larger than in previous years, but imports are about the same.

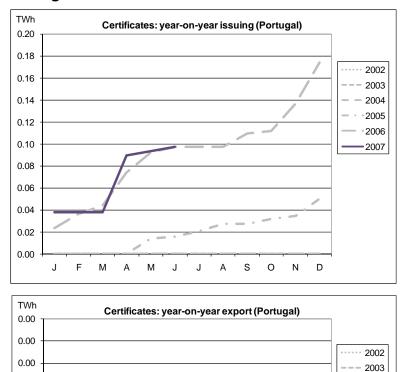

Norway continues to issue, export and redeem certificates at a higher rate than ever before, presumably for purposes of disclosing the source of electricity.

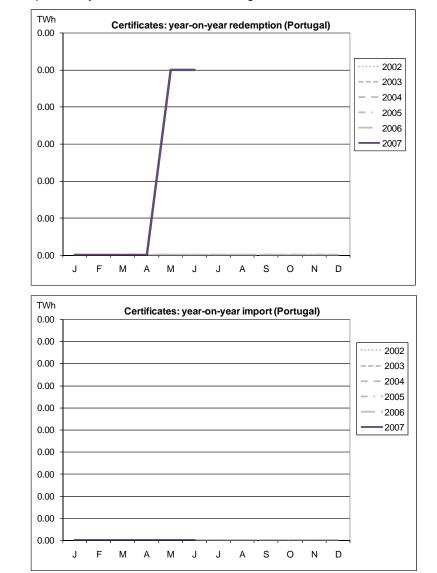

Portugal continues to issue around the same number of certificates than in previous years, and is now redeeming certificates.

Slovenia has redeemed a small number of certificates, but has otherwise been inactive for the past year.

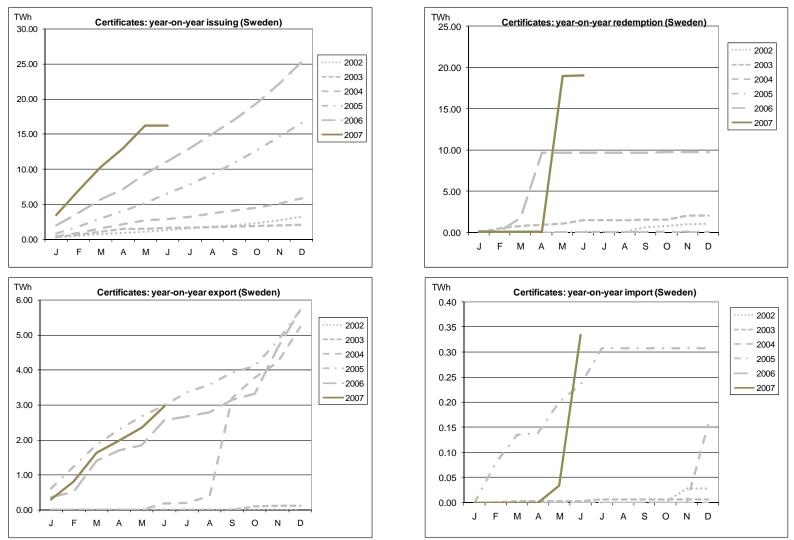

Spain. Issuing and redemption continue in a limited manner. International transfer now awaits development and approval of the revised Spanish Domain Scheme (note that Spanish activity was suspended on 16 June 2006 in the absence of a PRO-compliant Domain Protocol).

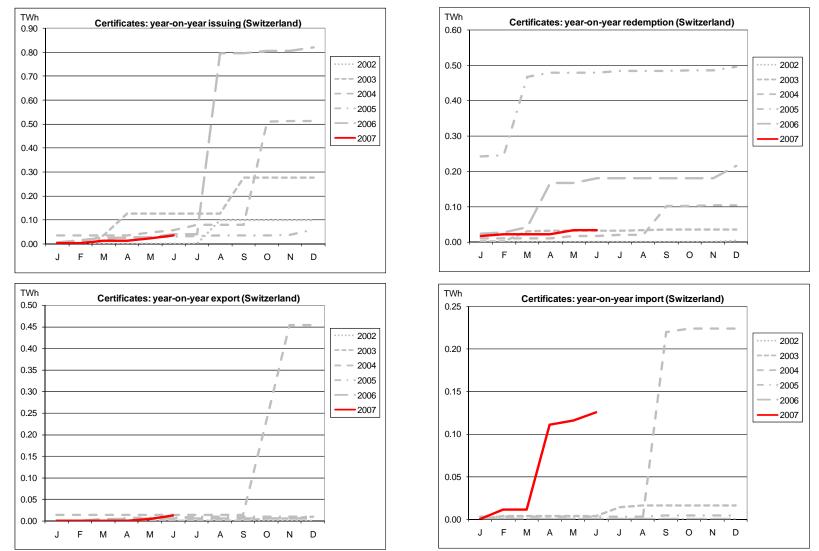

Sweden continues to issue and redeem more certificates than ever before, exporting about the same amount as in previous years but recently importing far more. In particular, redemptions during May were higher than any other country since AIB records began.

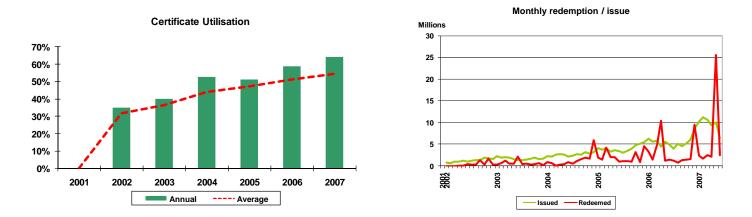

Switzerland has been relatively quiet this year, perhaps while it awaits the arrival of guarantees of origin later in the year, but has been importing more certificates than in the past.

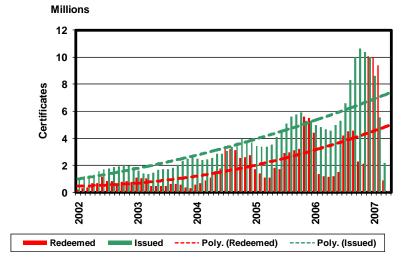

Realisation of value: The proportion of certificates that are redeemed has continued to rise to 54% overall, and 64% this year.

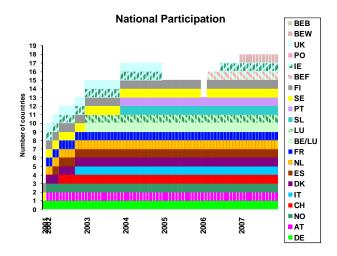

Rolling three-month averages show that the market continues to grow at a cyclical, increasing, rate.

Membership continues to grow, with Wallonia having applied for membership for 2007. Note that there was a short gap between Fingrid and Svenska Kraftnat ceasing membership, and Grexel taking over their roles; and a further gap as Ireland temporarily ceased membership.

Growth. Concerning the growth in issuing, transfers and redemption, it is interesting to see that transfers have remained fairly consistent for the last three years, at a time while issuing and redemption have grown 30-50% growth per annum.
